

CYBER INTELLIGENCE

Staff Cyber Threat Briefings

A staff cyber threat briefing is an opportunity to strengthen the 'human firewall' through engaging, relevant and high impact staff training.

A cyber threat briefing, tailored to your sector, audience and organisation's priorities, can empower better cyber hygiene across all levels of your business.

In our experience, cyber briefings often focus on asking people to change but rarely explain why.

Our approach is designed to achieve behaviour change and deliver "aha" moments regardless of your teams' current level of cyber literacy.

We present interactive threat briefings that empower change by explaining:

- ▷ Why your organisation is a target for cyber threat actors
- ▷ How cyber threat actors are currently targeting people in organisations just like yours.
- ▷ How staff can act to make themselves, and their organisation's, more resilient to current cyber threats.

Our speakers are all cyber practitioners on the frontlines of Australia and New Zealand's cyber security challenges. We animate our briefings with real-world data, stories and insights.

CyberCX is well positioned to deliver exceptional staff engagement through practitioner presentations, delivered by diverse cyber security practitioners.

Director, Cyber Intelligence

Leah Pinto

We can lead Cyber Threat Briefing sessions in person at our offices or virtually. All our briefings include real-world content and stories from CyberCX Intelligence.

All our Cyber Threat Briefings include:

- ▶ A **kick-off call** to understand your priorities, context and audience so we can tailor our briefing to your needs.
- ▶ A **slide deck** on the threat landscape relevant to your organisation, that can be shared across your organisation. An interactive briefing, which includes time for Q&A.
- ▶ Content informed by **CyberCX Intelligence's** significant Australian and New Zealand intelligence holdings, including latest data, trends, threat actors, insights, and real-world examples from recent cyber incidents.
